The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/623,541

Applicant(s)

SHIBATA ET AL.

Examiner

Julian D. Huffman

Art Unit

2853

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 June 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 4-7 and 15-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 4-7 and 15-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 7 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Silverbrook (U.S. 6,575,549 B1).

Silverbrook discloses:

With regards to claim 7, Silverbrook discloses an inkjet printing method using a printing head (fig. 1) having a plurality of nozzles (A-N) capable of ejecting ink for printing an image by ejecting ink based on printing data which instructs ejection or non-ejection of ink, the plurality of nozzles being aligned next to each other along a predetermined direction, the printing head being driven based on the printing data to eject ink, wherein

the printing data corresponding to an abnormal nozzle (nozzle h) malfunctioning in ink-ejection is added to the printing data corresponding to a neighboring nozzle of the abnormal nozzle (nozzles G or I, fig. 3, column 3, lines 2-12),

when an N-th nozzle of the plurality of nozzles is an abnormal nozzle, a neighboring printing area neighboring a printing area to be printed by the N-th abnormal

Art Unit: 2853

nozzle is printed using an (N-M)-th neighboring nozzle and an (N+M)-th neighboring nozzle (where N and M are positive integers) arranged in the neighborhood of the N-th abnormal nozzle based on the printing data corresponding to the N-th abnormal nozzle (column 3, lines 5-12, for a given print area, nozzles G and I on either side of nozzle H take turns printing the data of nozzle H, if nozzle H has print data), and

when the printing data corresponding to the N-th abnormal nozzle is added to that corresponding to the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle, a driving frequency for ejecting ink from the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle is increased (compare figs. 2 and 3, further since the abnormal nozzle may not eject ink at all, printing using the neighboring nozzles increases the driving frequency of ejection of ink).

Concerning claim 18, as evident from the above discussion, Silverbrook also discloses an apparatus with structure executing the above method.

3. Claims 7 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. 6,481,816 B1 to Oyen.

Oyen discloses:

With regards to claims 7 and 18, an inkjet printing method and apparatus using a printing head (fig. 1, element 3) having a plurality of nozzles (7) capable of ejecting ink for printing an image by ejecting ink based on printing data which instructs ejection or non-ejection of ink, the plurality of nozzles being aligned next to each other along a predetermined direction (fig. 1), the printing head being driven based on the printing data to eject ink comprising:

compensation means (fig. 2, element 14) for/step of adding the printing data corresponding to an abnormal nozzle malfunctioning in ink-ejection to the printing data corresponding to a neighboring nozzle of the abnormal nozzle (abstract);

when an N-th nozzle of the plurality of nozzles is an abnormal nozzle, a neighboring printing area neighboring a printing area to be printed by the N-th abnormal nozzle is printed by using an (N-M)-th neighboring nozzle and an (N+M)-th neighboring nozzle (where N and M are positive integers) arranged in the neighborhood of the N-th abnormal nozzle based on the printing data corresponding to the N-th abnormal nozzle (figs. 5a-5d, column 6, lines 2-25), and

when the printing data corresponding to the N-th abnormal nozzle is added to that corresponding to the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle, increasing a driving frequency for ejecting ink from the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle (compare figs. 5b and 5c).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-6 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oyen in view of Bland (6,278,469).

Oyen discloses:

With regards to claims 4 and 15, an inkjet printing method and apparatus using a printing head (fig. 1, element 3) having a plurality of nozzles (7) capable of ejecting ink for printing an image by ejecting ink based on printing data which instructs ejection or non-ejection of ink, the plurality of nozzles being aligned next to each other along a predetermined direction, the image being completely printed in a predetermined area of a print medium by a single movement of the printing head relative to the printing medium while ink is ejected from the nozzles of the printing head based on the printing data (column 4, lines 45-49, column 5, lines 23-29), comprising,

compensation means (fig. 2, element 14) for/step of adding the printing data corresponding to an abnormal nozzle malfunctioning in ink-ejection to the printing data corresponding to a neighboring nozzle of the abnormal nozzle (abstract),

when an N-th nozzle of the plurality of nozzles is an abnormal nozzle, a neighboring printing area neighboring a printing area to be printed by the N-th abnormal nozzle is printed by using an (N-M)-th neighboring nozzle and an (N+M)-th neighboring nozzle (where N and M are positive integers) arranged in the neighborhood of the nozzle based on the printing data corresponding to the N-th abnormal nozzle,

the printing data corresponding to the N-th abnormal nozzle is added to the printing data corresponding to the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle (figs. 5a-5d, column 6, lines 2-25).

Oyen discloses that the amount of ink deposited by the neighboring nozzles may be adjusted (column 6, lines 18-25).

Oyen does not expressly disclose compensation means for causing the printer to perform the step of adjusting the ratio of the printing data corresponding to the N-th

abnormal nozzle to be added to the printing data corresponding to the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle based on landing states of the (N-M)-th neighboring nozzle and the (N+M)-th neighboring nozzle, the states obtained based on information regarding the landing position and diameter of the neighboring nozzle as obtained from a test print.

Bland et al. discloses performing a test print on print medium, determining the landing states, including landing position and diameter information, of the nozzles, and adjusting the ratio of ink deposited based on the states (abstract). Further, Bland et al. teach that the technique may be applied to any ink jet printer (column 11, line 67).

It would have been obvious to one having ordinary skill in the art at the time of the invention to provide compensation means in Oyen which causes the printer to perform the step of adjusting the ratio of printing data based on landing states of the nozzles, as suggested by Bland, for the purpose of improving print quality without reducing throughput.

Response to Arguments

6. Applicant's arguments filed 14 June 2007 have been fully considered but they are not persuasive.

Applicant argues that neither Silverbrook or Oyen increase the driving frequency for neighboring nozzles.

However, both Silverbrook and Oyen provide additional ejection data to neighboring nozzles.

Oyen, Fig. 5b depicts the driving frequency of nozzles if no correction is performed. Fig. 5c depicts the driving frequency of nozzles after a certain type of correction is performed. In fig. 5b, the neighboring nozzles are driven 4 times, while in fig. 5c, neighboring nozzles are driven 12 times.

Silverbrook, Fig. 3, shows an additional 5 drivings of the neighboring nozzles when performing correction.

Applicant argues that Bland does not disclose determining higher quality nozzles to be used for compensating based on a landing state of the higher quality nozzles.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Applicant argues that one of ordinary skill in the art would not look to Bland et al. to modify Oyen because Bland uses multi-pass printing. This is an unsupported statement. It is a matter of fact that Bland states that the invention may be used in any type of printer (column 11, line 45-column 12, line 12). PHOSITA would have read this portion of Bland and been aware that Bland can easily be used in any type of printer. Further, the combination does not require multi-pass printing and the base reference to Oyen discloses single pass printing. The teachings of Bland are relevant regardless of whether single or multi-pass printing is conducted.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Julian D. Huffman whose telephone number is (571) 272-2147. The examiner can normally be reached on 10:00a.m.-6:30p.m. Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
